Contribution to the project

Student Reg. No	Responsible Tasks
IT22062574	The system automatically generates timetables by grouping registered students according to their academic year and specialization. It assigns lecturers to modules based on their registrations. For each module, a lecturer is automatically selected and added to the timetable without conflicts. Additionally, if a student cannot attend a scheduled lecture in a given week, the admin has the ability to send a notification message to the student and allow rescheduling the lecture to another available day for the same module.
IT22502360	The Lecture Management function enables administrators to efficiently manage lecturer information and academic tasks. Administrators can add new lecturers by submitting their personal and professional details, as well as view, update, delete, and search existing lecturer records with ease. The system also allows administrators to download detailed lecturer reports for academic and administrative purposes. Additionally, administrators can sort subjects by academic year and assign specific subjects to lecturers, ensuring better organization, streamlined operations, and enhanced academic management.
IT22252418	The students management function enables administrators to monitor students and students to register to the system. Students can register to the system by submitting their personal details and selecting their preferred groups. Administrators review each registration request and either confirm or decline it. If a request is declined, the student's data is automatically removed from the database. Approved students can later edit their profiles, search for other profiles, and generate detailed reports, ensuring a flexible and organized academic management experience.
IT22128836	The course management function enables administrators to organize academic content by adding modules to specific courses based on the year and specialization. Admins can also assign lectures and relevant documents to each module, with the ability to update or delete these entries as needed. Additionally, they can generate detailed reports summarizing specializations, modules, and assigned lectures. Users can search for modules by name or specialization, while admins manage module assignments for student profiles, ensuring a structured and efficient learning system. This function streamlines academic administration, enhancing accessibility and organization for both educators and learners.

1. Repository view

The screenshot displays the GitHub repository page for 'Academic-Scheduler' by user 'Dill1027'. The repository is a MERN project designed as a conflict-free timetable management system for educational institutions. The README includes a project overview, tech stack, features, team members, installation prerequisites, and steps for cloning and running the application.

Academic-Scheduler

MERN project

Sure! Here's the modified README, all with emojis to make it more engaging:

Academic Scheduler - Conflict-Free Timetable Management System 📅

Project Overview 🌟

The Academic Scheduler is a web application designed to manage and create conflict-free timetables for educational institutions. This system allows administrators to efficiently allocate courses 📖, assign faculty 👨‍🏫, manage student 🎓, and lecture information, and generate timetables 📅. The goal is to simplify the scheduling process while avoiding any timetable conflicts ❌. The goal is to simplify the scheduling process while avoiding any timetable conflicts ❌, making it easier for both students and staff to organize their academic activities.

Tech Stack 🛠️

- Frontend: React.js 📖
- Backend: Node.js, Express 🚀
- Database: MongoDB 3 📄
- Authentication: JWT 🔑
- Hosting: Heroku / AWS 🌐 (for deployment)

Features 🌟

- Admin Panel: Admins can manage courses, faculties, students, lecturers, and timetables 📅
- Timetable Generation: Conflict-free scheduling for students, lecturers, and rooms 📅
- User Management: Admins can add, edit, and delete users (students and lecturers) 📅
- Role-based Access Control: Different access rights for Admin and Managers 📅

Team Members & Roles 👥

1. Admin - (Admin Name) 👤

The Admin is responsible for managing the entire system and managing user roles. Key responsibilities include:

- Setting up and managing courses, faculties, and students 📅
- Managing all user access and permissions 📅
- Monitoring the overall system performance and usage 📅

2. 1st Manager (Courses, Faculty, Modules) - (Manager 1 Name) 👤

The 1st Manager handles all tasks related to course management, including:

- Creating, updating, and deleting courses 📅
- Managing faculty members for courses 📅
- Managing course modules and ensuring that the course details are up-to-date 📅

3. 2nd Manager (Students, Lecturers) - (Manager 2 Name) 👤

The 2nd Manager focuses on the management of students and lecturers:

- Adding, updating, and removing student and lecturer records 📅
- Ensuring proper allocation of students for courses 📅
- Managing course enrollment and lecture assignments 📅

4. 3rd Manager (Timetables, Locations) - (Manager 3 Name) 👤

The 3rd Manager is responsible for timetable management:

- Creating and editing timetables for both students and lecturers 📅
- Ensuring that there are no conflicts in scheduling ❌
- Managing room allocations and ensuring that each event has an appropriate location 📅

Installation 🛠️

Prerequisites 📋

Before running the project, make sure you have the following installed:

- Node.js (for backend) 📖
- npm / yarn (for package management) 📄
- MongoDB (for database) 📄

Steps 📋

1. Clone the repository:

```
git clone https://github.com/poor-moon/moon-academic-scheduler.git
```
2. Install dependencies for both frontend and backend:

```
cd frontend
npm i
cd backend
npm i
```
3. Set up environment variables:

```
cd frontend
cp .env .env.local
cd backend
cp .env .env.local
```
4. Start the development server:

```
cd frontend
npm start
cd backend
npm start
```
5. Visit <http://localhost:3000> for the frontend and <http://localhost:3000> for the backend.

Contributing 🙌

If you'd like to contribute to this project, please fork the repository, create a new branch, make your changes, and submit a pull request. Ensure that your code is well-documented and adheres to the existing style conventions.

Academic Scheduler - Conflict-Free Timetable Management System 📅

Project Overview 🌟

The Academic Scheduler is a web application designed to manage and create conflict-free timetables for educational institutions. This system allows administrators to efficiently allocate courses 📖, assign faculty 👨‍🏫, manage student 🎓, and lecture information, and generate timetables 📅. The goal is to simplify the scheduling process while avoiding any timetable conflicts ❌, making it easier for both students and staff to organize their academic activities.

Tech Stack 🛠️

- Frontend: React.js 📱
- Backend: Node.js, Express 🚀
- Database: MongoDB 🗄️
- Authentication: JWT 🔑
- Hosting: Heroku / AWS ☁️ (for deployment)

Features 🌟

- Admin Panel: Admins can manage courses, faculties, students, lecturers, and timetables. 🛠️
- Timetable Generation: Conflict-free scheduling for students, lecturers, and rooms. 📅
- User Management: Admins can add, edit, and delete users (students and lecturers). 👤
- Role-based Access Control: Different access rights for Admin and Managers. 🔑

Team Members & Roles 👥

1. Admin - [Admin Name] 🛠️

The Admin is responsible for overseeing the entire system and managing user roles. Key responsibilities include:

- Setting up and managing courses, faculties, and students. 📖
- Managing all user access and permissions. 🛡️
- Monitoring the overall system performance and usage. 📊

2. 1st Manager (Courses, Faculty, Modules) - [Manager 1 Name] 📅

The 1st Manager handles all tasks related to course management, including:

- Creating, updating, and deleting courses. 📖
- Assigning faculty members to courses. 👨‍🏫
- Managing course modules and ensuring that the course details are up-to-date. 📅

3. 2nd Manager (Students, Lecturers) - [Manager 2 Name] 👤

The 2nd Manager focuses on the management of students and lecturers:

- Adding, updating, and removing student and lecturer records. 📖
- Ensuring proper allocation of students to courses. 📅
- Managing course enrollment and lecturer assignments. 📅

4. 3rd Manager (Timetables, Locations) - [Manager 3 Name] 📅

The 3rd Manager is responsible for timetable management:

- Creating and editing timetables for both students and lecturers. 📅
- Ensuring that there are no conflicts in scheduling. ❌
- Managing room allocations and ensuring that each event has an appropriate location. 📍

Installation 🛠️

Prerequisites 🛠️

Before running the project, make sure you have the following installed:

- Node.js (for backend) 📱
- npm / yarn (for package management) 🚀
- MongoDB (for database) 🗄️

Steps 🛠️

- Clone the repository:

```
git clone https://github.com/your-username/academic-scheduler.git
```
- Install dependencies for both frontend and backend:
 - Frontend:

```
npm i
```
 - Backend:

```
npm i
```
- Set up environment variables:
 - For frontend: `.env` (to set the API URL, etc.)
 - For backend: `.env` (to set MongoDB URL, JWT secret, etc.)
- Start the development servers:
 - Frontend:

```
npm start
```
 - Backend:

```
npm start
```
- Visit `http://localhost:3000` for the frontend and `http://localhost:5000` for the backend.

The screenshot shows the SonarQube web interface for the project 'academic_scheduler'. The 'Issues' tab is active, displaying a list of issues. A filter on the left shows 'My Issues' selected. The issues list includes:

- Issue 1:** Add "lang" and/or "xml:lang" attributes to this "<html>" element. Severity: Major. Status: Open. Effort: 2min. Location: Backend/.../lib/utl/rw-pre-gyp/index.html.
- Issue 2:** Add a description to this table. Severity: Minor. Status: Not assigned. Effort: 5min. Location: Backend/.../tar/coverage/cov-report/index.html.
- Issue 3:** Add a description to this table. Severity: Minor. Status: Not assigned. Effort: 5min. Location: Backend/.../tar/coverage/cov-report/tar/index.html.

The left sidebar shows filters for Type (Bug, Vulnerability, Code Smell) and Severity (Blocker, Critical, Major, Minor, Info). The right sidebar shows project settings and information.

This screenshot shows the same SonarQube interface for the project 'academic_scheduler', but with a different set of issues displayed. The 'Issues' tab is still active. The issues list includes:

- Issue 4:** Add "lang" and/or "xml:lang" attributes to this "<html>" element. Severity: Major. Status: Open. Effort: 2min. Location: Backend/.../lib/utl/rw-pre-gyp/index.html.
- Issue 5:** Add a description to this table. Severity: Minor. Status: Not assigned. Effort: 5min. Location: Backend/.../tar/coverage/cov-report/index.html.
- Issue 6:** Add "thead" headers to this "<table>". Severity: Major. Status: Open. Effort: 2min. Location: Backend/.../coverage/cov-report/tar/lib/high-level-opt.js.html.
- Issue 7:** Add a description to this table. Severity: Minor. Status: Not assigned. Effort: 5min. Location: Backend/.../coverage/cov-report/tar/lib/index.html.

The left sidebar shows filters for Type (Bug, Vulnerability, Code Smell) and Severity (Blocker, Critical, Major, Minor, Info). The right sidebar shows project settings and information.

Delete modules

1. Selenium IDE with the base URL

2. Automation test script

3. Selenium IDE after running the test case

The screenshot shows the Selenium IDE interface for a project named 'Academic Scheduler -student registration*'. The test case 'Delete student*' is shown as executed. The command log table is as follows:

	Command	Target	Value
3	✓ click	css=div:nth-child(2) > h3	
4	✓ click	css=div:nth-child(1) > div > p	
5	✓ click	css=.list-group-item:nth-child(1) .btn-danger	
6	✓ click	css=.swal2-confirm	
7	✓ click	css=.swal2-confirm	

Below the table, there are input fields for Command, Target, Value, and Description. A progress bar indicates 'Runs: 1 Failures: 0'. The Log tab shows the following entries:

- 3. click on css=div:nth-child(2) > h3 OK 12:08:00
- 4. click on css=div:nth-child(1) > div > p OK 12:08:00
- 5. click on css=.list-group-item:nth-child(1) .btn-danger OK 12:08:00
- 6. click on css=.swal2-confirm OK 12:08:01
- 7. click on css=.swal2-confirm OK 12:08:01
- 'Delete student' completed successfully 12:08:01

4. Verify items on the page

This screenshot is identical to the one above, showing the Selenium IDE interface for the 'Delete student*' test case. It displays the command log, input fields, progress bar, and the log tab with the following entries:

- 3. click on css=div:nth-child(2) > h3 OK 12:08:00
- 4. click on css=div:nth-child(1) > div > p OK 12:08:00
- 5. click on css=.list-group-item:nth-child(1) .btn-danger OK 12:08:00
- 6. click on css=.swal2-confirm OK 12:08:01
- 7. click on css=.swal2-confirm OK 12:08:01
- 'Delete student' completed successfully 12:08:01

Update modules

1. Selenium IDE with the base URL

2. Automation test script

3. Selenium IDE after running the test case

The screenshot shows the Selenium IDE interface in Mozilla Firefox. The project is named 'ITPM Project*'. The test case 'update*' is selected. The test case contains 11 steps, each with a command, target, and value. The log shows the execution of these steps, with the final status being 'update* completed successfully'.

Command	Target	Value
select	name=course	label=Software Engineering
click	css=col-md-6:nth-child(2) option:nth-child(3)	
click	name=moduleName	
type	name=moduleName	NDM
click	css=mb-3:nth-child(3) > form-control	
type	css=mb-3:nth-child(3) > form-control	Mid exam
click	css=align-items-center form-control	
type	css=align-items-center form-control	mrs. diki
click	css=btn-primary:nth-child(2)	
click	css=swal2-confirm	
close		

Log:

- 23. type on css=align-items-center form-control with value mrs. diki OK 22:45:3
- 24. click on css=btn-primary:nth-child(2) OK 22:45:3
- 25. click on css=swal2-confirm OK 22:45:3
- 26. close OK 22:45:3
- update* completed successfully 22:45:3
